

## Capture the Flag (CTF)

### Requirements:

You shall use Wireshark in a Linux distribution. (Do **not** ask whether other platform can be used or not; Linux and Wireshark are must.). You can use VirtualBox and Kali which can be found freely in internet, or you can use Ubuntu from the previous homework.

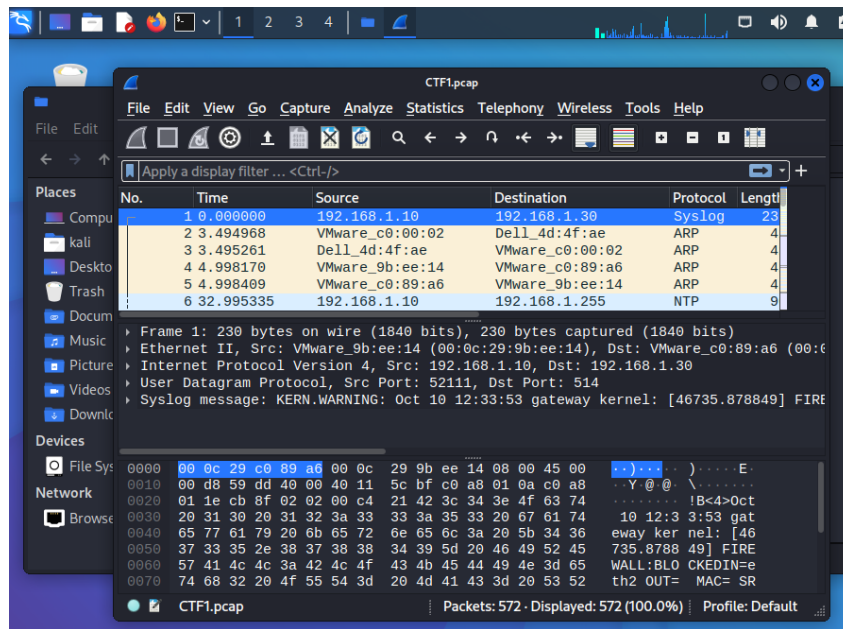

### Questions:

You have been provided CTF1.pcap file which was captured by Wireshark application. Answer the following questions (0.5 point each):

1. What is Ann's e-mail address?
2. What is Ann's e-mail password?
3. What are the e-mail addresses that Ann sent e-mail?
4. What are the two things Ann requested from her friend to bring?
5. Which country is the meeting place according to the attached document?
6. What is the SHA1 value of the file sent as an e-mail attachment?

### Important Directions:

Provide a snapshot while you are using Wireshark in a Linux distro as a proof.

Do **NOT** provide any other file or attachment to your answer file.

Do **NOT** take any other snapshot; just provide your answers in text format.

Send your answers in a Word document.
